Don't Let
Moisture
Spoil Your

Leather!

Hire our Desiccant
Dehumidifiers for your
short term humidity
control requirement during
Processing & Storage

**on
RENT**

Humidity & Temperature Control Services

We have the right solutions, specially customized for YOU.

Effect of moisture on Leather:

Leather products are hygroscopic in nature, presence of moisture results in :

1. Microbial growth during storage
2. Leather loses sheen and structural strength
3. Fungal growth & discoloration drastically increases leather deterioration
4. Above 50% RH, mold, mildew & fungi germination increases.
5. Reduced shelf life
6. Potential Health hazard in manufacturing & storage

**Ideal condition for leather
storage: 35-40% RH**

**Desirable moisture content of
leather: 8 to 12%**

The only way to prevent fungal growth is to ensure that the leather does not regain moisture after it is processed or in storage. Primary focus is to maintain the moisture content of 8-12% in leather and control humidity level in ambient air to discourage moisture absorption.

Why Rent a dehumidifier ?

- Fulfil short term dehumidification & temperature control requirement
- Fulfil seasonal & emergency requirement
- Postpone capital expenses
- Process modification, expansion & diversification
- Try & test equipment before purchase
- Research & Development requirement
- Restore water damaged property
